

## Site Design Standards

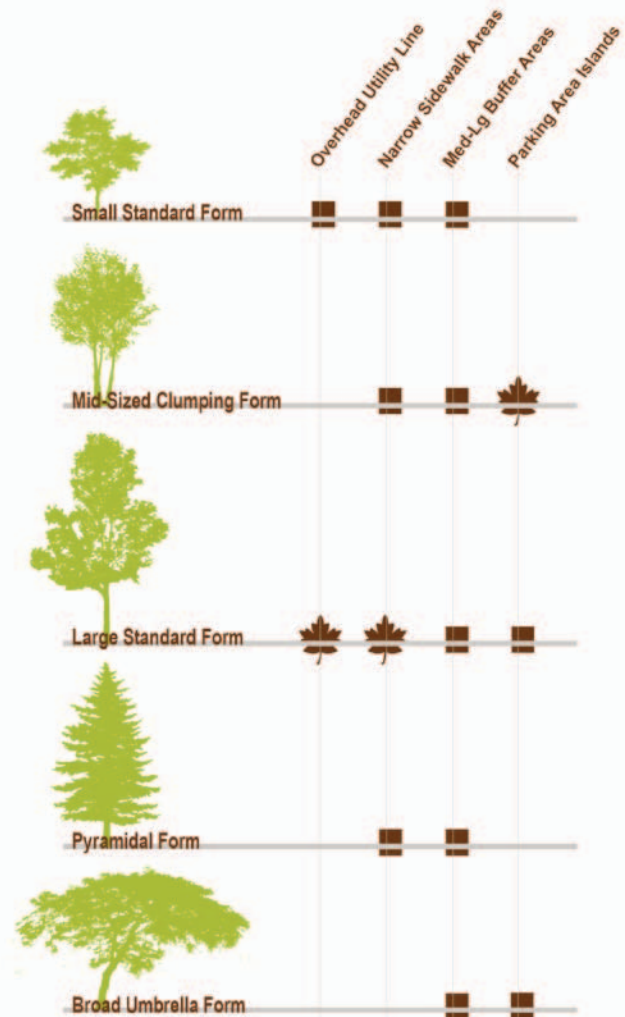

### Street Tree Use and Selection

#### Legislative Intent

- 20.72 It is intended that trees will be planted within the Borough's Streetscapes, parking areas, and required landscape buffers to provide a pedestrian-scaled environment, a seasonal succession of landscape interest, a buffer from undesirable views, a barrier to the detrimental effects of wind and noise, and a comfortable shade canopy to lower energy consumption and reduce carbon dioxide levels.

#### Design Standards

- 20.73 With due consideration of mature plant forms, trees shall be selected to fit a given site context and to produce desired landscape effects such as shade, buffers, and/or seasonal vibrancy.

■ denotes acceptable form selection

■ denotes form selection permitted only with Borough Shade Tree Commission Approval
